Docket No.: 1247-0473P

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) An encryption processing apparatus comprising:

necessity determination means for determining whether or not received data needs to be encrypted; and

encryption means for encrypting data which is determined as having to be encrypted, before being stored in a storage apparatus to output; and

storage form determination means for determining a storage form of the storage apparatus,

wherein the necessity determination means determines whether or not the data needs to
be encrypted based on a determination result of the storage form determination means, and
wherein the necessity determination means determines whether or not to encrypt the
received data based on whether the storage form determination means determines that the storage
form is volatile or non-volatile.

- 2. (Canceled).
- 3. (Currently Amended) The encryption processing apparatus of elaim 2claim 1, wherein in cases where the storage form determination means determined the received data as being to be maintained in the storage apparatus even when the storage apparatus is isolated from ethersremoved, the necessity determination means determines that the data needs to be encrypted.

- 4. (Original) The encryption processing apparatus of claim 1, wherein the necessity determination means is constructed so as to determine whether or not the data needs to be encrypted based on a form or items of the data.
- 5. (Original) The encryption processing apparatus of claim 4, wherein in cases where the received data is presented in an encrypted form, the necessity determination means determines that the received data does not need to be encrypted.
- 6. (Original) The encryption processing apparatus of claim 4, wherein in cases where an item of the received data is an indicator regarding importance of data, the necessity determination means determines that the received data needs to be encrypted.
- 7. (Original) The encryption processing apparatus of claim 6, wherein the indicator is a flag or an instruction for confidential.
- 8. (Original) The encryption processing apparatus of claim 4, wherein in cases where an item of the received data is a predetermined condition, the necessity determination means determines that the received data needs to be encrypted.
- (Original) The encryption processing apparatus of claim 1, further comprising:
 decryption means for decrypting the encrypted data which is stored in the storage apparatus,

Docket No.: 1247-0473P

wherein the data is outputted after being decrypted by the decryption means.

10. (Original) The encryption processing apparatus of claim 1, the encryption processing

apparatus being used as an apparatus at a data receiving side.

11. (Currently Amended) An encryption processing system comprising:

a host apparatus for offering services such as data creation; and

an encryption processing apparatus which encrypts data received from the host

apparatus, stores the encrypted data in the storage apparatus, and outputs the data from the

storage apparatus,

wherein the host apparatus is provided with condition providing means for providing a

condition concerning encryption to data created by the host apparatus before transmitting to the

encryption processing apparatus, and

wherein the encryption processing apparatus comprises:

necessity determination means for determining based on presence or absence of the

condition, whether or not received data needs to be encrypted,; and

storage form determination means for determining a storage form of the storage

apparatus,

wherein the encryption processing apparatus encrypts at the encryption processing

apparatus side the received data when the necessity determination means determines that the

received data needs to be encrypted, and

Docket No.: 1247-0473P

4

Application No. 10/073,017 Amendment dated August 24, 2006 After Final Office Action of April 24, 2006

wherein the condition is whether the storage form determination means determines that the storage form is volatile or non-volatile.

12. (New) An encryption processing apparatus comprising:

necessity determination means for determining whether or not received data needs to be encrypted; and

encryption means for encrypting data which is determined as having to be encrypted, before being stored in a storage apparatus to output, wherein the encryption processing apparatus is an image forming apparatus.
